

HAI Project

Providing access to millions of users to the first public AI system in the world.

Why do we need AI?

The globalization has affected everyone in the world as individuals and overall companies creating a more connected world and a more competitive environment but on the other side of the coin we should consider the increasing cyber-attacks statistics, monopolized markets and the unbalanced wealth in the world.

There is no training that can allow humans to prevent every type of cyber-attack 24/7 every single day or even detect new threats created on a daily basis, we have a problem, in 2016 at least 70% of the companies around the world suffered from a targeted attack on their systems and nearly 60% was hit by ransomware.

The wealth distribution is so messed up as only 1% of the population has the 50.1% of the total wealth in the world, from these only 0.7% owns the 46% at \$280tn this problem comes from the monopoly of huge enterprises in multiple sectors as these companies slowly eat their competition by using their millionaire-budgets in advertising, market research and strategies that outrun small businesses preventing normal people to gain wealth.

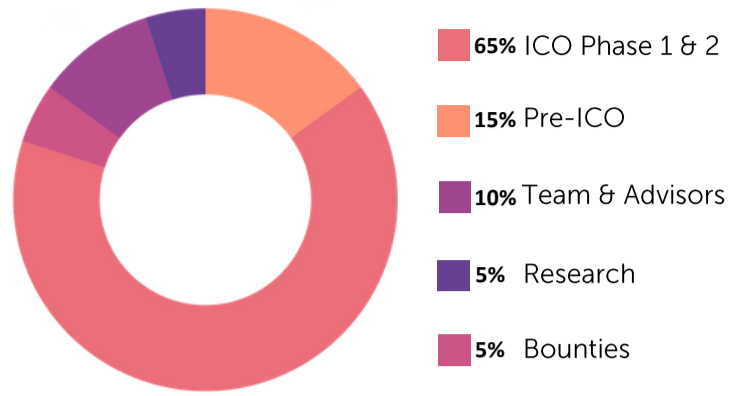

The final issue we identified was the lack of financial education among new traders and the average person creating thousands of debts and destroying lifestyles of many people this has been studied in different ways, studies show that only 24% of millennials demonstrate basic financial education if it isn't scary enough only 46% of American citizens have a small emergency fund among many other statistics that show how uneducated is the people with finances, it gets worst at trading, how do you recommend at personalized solution for everyone considering more than 1,000,000 variables? You can't.

Our solution: HAI

The way to solve the previous problems is HAI which stands for Hybrid Artificial Intelligence, providing an advanced problem-solving AI focused in Cyber-Security, Finances and Business Intelligence, this can be possible by using different techniques.

The capabilities of HAI consist of real-time malware analysis, deep network packets inspection, threat hunting, market predictions, popularity ratings in stocks or similar, TA&FA analysis, market research, results projections, ideal costumers targeting, you name it, with HAI the sky is the limit as we plan to solve most of the issues and save millions of human hours. HAI is going to be available for everyone who wants to use it.

Token Distribution

Total Supply: 100,000,000 HAI

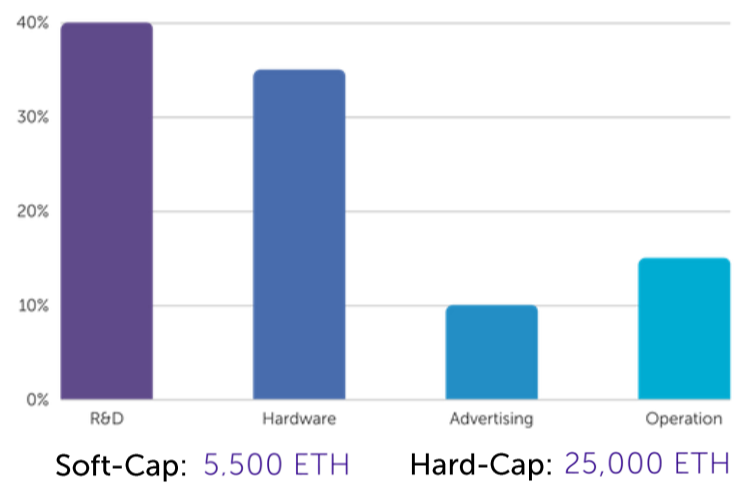

Token Sale

Pre-ICO Phase:	From April 30th until May 14th
15,000,000 HAI Amount Available	1 ETH = 2,400 HAI Token Price 20% Bonus
ICO Phase 1:	From May 15th until May 30th
35,000,000 HAI Amount Available	1 ETH = 2,000 HAI Token Price 15% Bonus
ICO Phase 2:	From May 30th until June 13th
30,000,000 HAI Amount Available	1 ETH = 2,000 HAI Token Price 10% Bonus

*Unsold tokens will be burned.

**Minimum contribution size is 0.1 ETH.

Funds Allocation

Use of HAI tokens & Lending

The main idea of using tokens in the HAI ecosystem is to take advantage of the Ethereum Blockchain by the use of Smart-Contracts developed automatically in order to use HAI's as processing power in HAI's main computer, therefore completing tasks faster or enabling a higher complexity problem solving where as the total supply of HAI's represents a direct relationship with the machine power of HAI.

The previous use leads the project to the creation of a lending process in which everyone who holds HAI tokens can deposit them into our platform and someone who wants to use HAI but doesn't have any tokens can borrow tokens with a certain fee depending on the duration of the service and the number of tokens required, this fee goes directly to the tokens owner providing benefits to both parties and allowing HAI to become more stable as a currency avoiding price spikes.

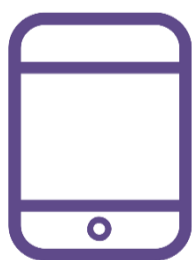

HAI Project Future Plans

The HAI Project aims to provide solutions for almost every industry known but we need to focus on the first 3 more critical industries that require the computing power and knowledge of HAI but we also plan on allowing every day users to be able to use HAI from different sources and very specific tasks creating a high-end tool available for users and companies all around the globe.

Primary HAI Features

Secure

User Friendly

Self-Improve

Public

A Green Solution: HAI

We aim to provide a solution which doesn't affect the environment in any possible way that's why we decided to be a 100% emission free project using natural energy from a variety of available sources and avoiding any unnecessary damages to the environment by recycling all the used materials in the project, we want you to take action by supporting green projects, the world needs us.

The HAI Project's Team plans on helping the planet by creating the HAI-a-tree event in which resources gained from diverse revenue streams are going to be used for reforestation, zones cleaning and donations to different associations around the globe.

"Never doubt that a small group of thoughtful, committed citizens can change the world; indeed, it's the only thing that ever has." -Margaret Mead
